## **Acknowledgments**

The production of this document would not be possible without the assistance of many individuals and the cooperation of the hospitals.

The Vermont Department of Banking, Insurance, Securities and Health Care Administration (BISHCA) thanks the Vermont Association of Hospitals and Health Systems - Network Services Organization (VAHHS-NSO) for providing assistance under a contract with the department and for working with the hospitals to ensure timely and accurate reporting of the data. BISHCA also thanks the participating hospitals for their efforts in submitting the data and responding to requests for clarification and corrections. In addition, BISHCA appreciates the sharing of data by the New Hampshire Department of Health and Human Services, the Massachusetts Division of Health Care Finance and Policy and the New York Department of Health. These organizations provide data for Vermont residents using New Hampshire, Massachusetts and New York hospitals.

## **Disclaimer**

Hospital discharge data for use in this publication were supplied by the VAHHS-NSO reporting system, Vermont Explor, under a contract with BISHCA. These data were supplied upon the authorization of the hospitals through agreements between VAHHS-NSO and each participating hospital.

After receipt of the data files from VAHHS-NSO, the data undergo additional editing and processing by the Vermont

Department of Health (VDH), under an agreement with BISHCA, before inclusion in the Vermont Uniform Hospital Discharge Data Set. The Vermont Uniform Hospital Discharge Data Set is used to construct this Hospital Utilization Report and is the official state data file available to the public. The Health Department does not assume responsibility for errors in the data due to coding or processing by hospitals, VAHHS-NSO Vermont Explor, or other data providers.

## **Report Available in Electronic Format**

This report is available on the BISHCA website:

<http://www.bishca.state.vt.us/health-care/research-data-reports/vermont-hospital-utilization-reports-vhur>

and on the VDH website:

<http://healthvermont.gov/research/hospital-utilization.aspx>. To obtain a hard copy of this report, or tables in Excel, Word or PDF formats, contact the Vermont Department of Health at (802) 863-7300 or (800) 869-2871.

## **Requesting Hospital Data Files**

Public Use data files are available on the VDH website:

<http://healthvermont.gov/research/hospital-utilization.aspx>.

Information on requesting research hospital discharge data sets (with non-public data elements not included in Public Use data files) can be found on the BISHCA website:

<http://www.bishca.state.vt.us/health-care/research-data-reports/vuhdds-frequently-asked-questions>.

For any additional information concerning the data sets, contact the Vermont Division of Health Care Administration at (802) 828-2900 or (800) 631-7788.

# Introduction

## Introduction

*The Vermont Inpatient Hospital Utilization Report* presents information about patient health issues and hospital services provided within the inpatient setting.

Under the provisions of Act 53 addressing hospital and health system accountability and spending, these data provide key information about population-based utilization of inpatient services for the hospital community needs assessments (CNA) including key pieces of the Hospital Report Cards posted at <http://www.bishca.state.vt.us/health-care/hospitals-health-care-practitioners/2011-hospital-report-card>, and the four-year health resource allocation plan (HRAP). The HRAP identifies and prioritizes statewide and sub-state need for health services and resources and informs the certificate of need (CON) process.

Data are presented in two basic ways:

- Hospital-based analyses compare data by hospital and include all patients who received inpatient and outpatient services from that hospital, regardless of their residency. Hospital-based analyses have applications for health system planning, cost containment, and resource development.
- For inpatient data, hospital service area (HSA) analyses are used to compare data for residents of 13 geographic regions of Vermont who were provided services in any Vermont, New Hampshire, New York, or Massachusetts hospital. With some caveats, HSA analyses can help compare morbidity and practice variations across different regions of Vermont. See page 9 for maps of Vermont towns and HSAs.

This volume includes data across inpatient setting for all patients,

regardless of residency, at Vermont's acute care hospitals. It also includes data for Vermont residents using New Hampshire, New York and Massachusetts acute care hospitals.

## History of the Hospital Utilization Report

The ten sections that comprise this volume are a continuation of a series of hospital utilization publications that have been issued annually since 1975. Although publication has been continuous, different organizations have been involved in its production over the years. The Cooperative Health Information Center of Vermont, Inc. (CHICV) published the Monographs from 1975 to 1982. In 1983, the CHICV corporation was dissolved and statutory authority to collect, process, store and analyze hospital utilization information was given to the Vermont Hospital Data Council. The Council designated the Vermont Department of Health (VDH) as manager of the hospital utilization data. In 1992, the Data Council's statutory authority was transferred to the Vermont Health Care Authority. In 1996, the Authority was merged with the Department of Banking, Insurance and Securities and became the Division of Health Care Administration. Under 18 V.S.A. §§ 9410, 9453, and 9457, the Division is charged with collecting hospital utilization data in a standardized format and to ensure that these data are not used to directly or indirectly identify individual patients or health care practitioners. The Vermont Department of Banking, Insurance, Securities and Division of Health Care Administration (BISHCA) have an agreement with VDH to manage the hospital discharge database and produce the utilization reports. The utilization reports have been published by VDH since 1983.

Beginning in 1998, a section on outpatient procedures (ambulatory surgeries) was included. Emergency Department (ED) and Hospital

Setting Comparison sections were added in 2001. Prior to 1998, outpatient procedures were reported in a separate publication.

Beginning in 2006 the hospital utilization reports are published in four separate volumes: Inpatient Discharges, Outpatient Discharges, Emergency Visits and Comparison across Hospital Settings. This report is the fourth in the series now titled the “Vermont Inpatient Hospital Utilization Report.”

## **Sources of Data**

All fourteen of Vermont's civilian acute care hospitals have contributed data to the Vermont Uniform Hospital Discharge Data Set. The Veterans Administration hospital in White River Junction submitted data until June 30, 2006. The Brattleboro Retreat in Brattleboro and the Vermont State Hospital in Waterbury are strictly psychiatric hospitals and have not participated in this data collection effort. The acute care hospitals, under an agreement with the Vermont Association of Hospitals and Health Systems - Network Services Organization (VAHHS-NSO), supply discharge abstracts directly to VAHHS-NSO in electronic formatting for processing and consolidation. Under a contract with BISHCA, VAHHS-NSO provides data to VDH. Under agreements administered by BISHCA, VDH obtains records of Vermont resident discharges from hospitals in neighboring states from the Massachusetts Division of Health Care Finance and Policy, the New Hampshire Department of Health and Human Services and the New York Department of Health.

Upon receipt of Vermont hospital discharge data from VAHHS-NSO, VDH edits the data and checks for completeness and internal consistency. Results of these analyses are shared with VAHHS and participating Vermont hospitals as part of an ongoing quality improvement process.

## **Diagnosis and Procedure Grouping Systems**

### *DRGs and MDCs*

For inpatient discharges, Diagnosis Related Groups (DRGs) and Major Diagnostic Categories (MDCs) are used for grouping diagnoses. In October 1983, the U.S. Centers for Medicare and Medicaid (CMS) adopted a prospective system for reimbursing hospitals for hospitalizations of Medicare beneficiaries. This system established a payment schedule for groups of similar conditions that were expected to consume similar resources. Since 1983, the DRGs have been refined and added to a number of times, and are currently revised annually on October 1. The DRG assigned to an individual hospitalization is the definition in effect on the date of discharge. Beginning Oct 1, 2007 a major change in DRGs went into effect: these new DRGs are known as Medicare Severity Diagnosis Related Groups or MS-DRGs.

DRGs and MS-DRGs, which describe conditions and procedures related to similar body systems or etiologies, are grouped into 25 MDCs. MDCs are the basic tabulation units used in the inpatient report. Inpatient discharges with an invalid MDC are excluded from this report. MDCs are listed in Appendix B. Appendix C lists DRGs and MS-DRGs within each MDC.

## **Exclusions**

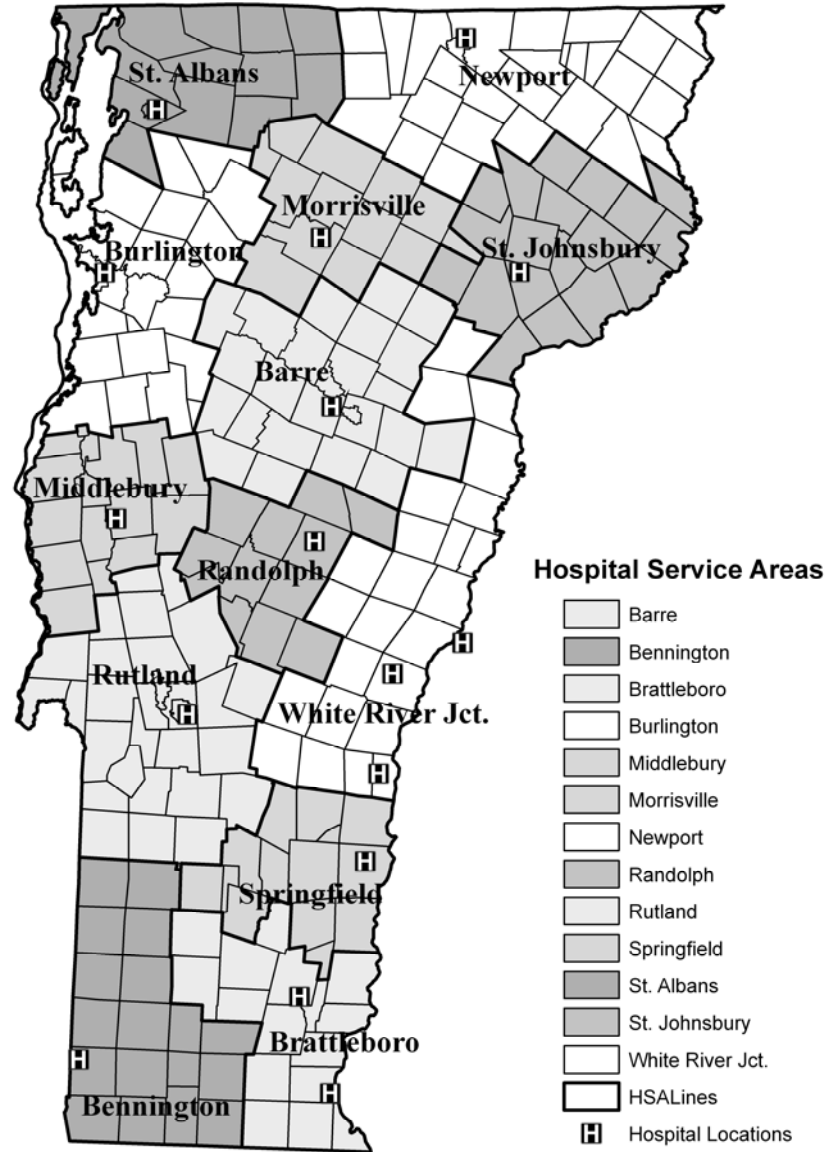

As in any data set of this size, there are a small number of records with incomplete or missing elements. These records must be excluded from particular analyses. We have indicated the number of missing records in each table so that all totals can be reconciled. Veterans Administration data were not provided after June 30, 2006. In 2005, 2.5% of the inpatient discharges were from the VA hospital, approximately half from out of state residents. Most VA resident discharges in 2005 came from the WRJ HSA and to a lesser degree from Springfield and Randolph.

Throughout the report, to avoid counting hospitalizations for delivery twice, the maternal record is included, but the infant record is not. This is a standard practice in hospital utilization analysis. However, discharge records for infants are retained in the Vermont Uniform Hospital Discharge Data Set to support research and analyses that include this population.

# **Overview and Highlights**

---

## Overview

---

- **Total health care spending** on Vermont residents increased 7.6% from 2008 to 2009 to \$4.71 billion while total spending on Vermont providers was \$4.66 billion and increased 5.2% during the same period, according to the [2009 Vermont Health Care Expenditure Analysis & Three Year Forecast](#).<sup>1</sup> In 2009, hospital spending on Vermont residents totaled \$1.7 billion and accounted for 37% of total health care spending as the largest provider category, followed by physician services at 14% of total health spending and drugs and supplies at 12%.
- **Vermont's Population is Aging:** From 1990-2009, the percent of Vermonters aged 45+ continued to grow. The percent of Vermonters 45 years or older in 2009 was 46.7% (Section I). According to the [U.S. Census in 2009](#),<sup>2</sup> the national rate for those 45 years or older was 38.7%. As the Vermont population continues to age, the number of adults with age-related medical conditions and chronic diseases will continue to rise and require more health care services. Medicare continues to be the leading principal payer for hospital inpatient discharges at 45.7% of total discharges (Section VII).
- **Total hospital revenues continued to rise**, but outpatient revenues continued to significantly outpace inpatient revenues (See Figure 1). Between 2000 and 2009, inpatient revenues increased 80% and outpatient revenues increased 225%.<sup>3</sup>

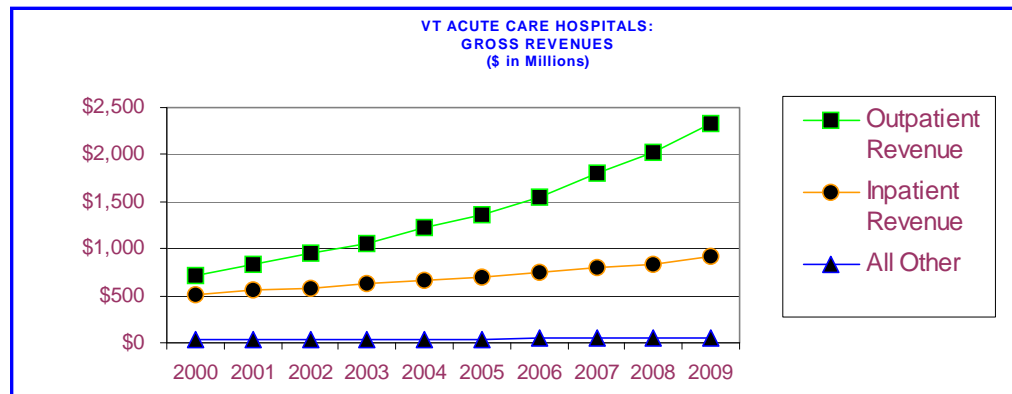

Figure 1

Data Source: HCA Annual Budget Submission.

- **From 2008 to 2009, per member per month (PMPM) payments for commercially insured Vermont residents increased 11.4 % for inpatient services and 8.1% for outpatient hospital services** despite stagnation in utilization rates. For the same period utilization for inpatient services declined by 0.5 % and rose by 1.6 % for hospital outpatient services according the 2010 Healthcare Utilization and Expenditure Report as reported by the Vermont Healthcare Claims Uniform Reporting & Evaluation System (VHCURES).

## Inpatient Highlights

---

### Highlights of Vermont Inpatient Utilization

- **In 2009 there were 52,243 inpatient discharges for Vermont residents** for hospitals in Vermont, New Hampshire, Massachusetts, and New York excluding newborns but including maternal records. There were no inpatient discharge records from the VA hospital in White River Junction included in the annual data set (Section V).
- **There were 47,558 inpatient discharges from Vermont hospitals in 2009**, excluding newborns but including maternal records, representing both Vermont residents and non-residents. Similar to the findings in 2007 and 2008, almost half of these records, or 23,669 of the total inpatient discharges, originated in the Emergency Department (Section IX).
- **Inpatient utilization declined from 1990 to 2009.** The inpatient hospital discharge rate and average length of stay decreased significantly in this time period (Figures 2 & 3). Factors influencing this decline include the continuing shift of treatment and procedures from the inpatient to the outpatient setting and changes in reimbursement and cost-containment strategies.
- **In 2009, the Morrisville hospital service area (HSA) had the lowest age-adjusted utilization rate at 66.9 discharges per 1,000 Vermonters and the Rutland hospital service areas had the highest rate at 108.0 per 1,000.** The average rate across all Vermont HSAs was 84.0. (Variation in utilization rates among hospital service areas from 2004-2009 is illustrated in Figure 5: see Section V.)
- **Out-migration of Vermont resident inpatient discharges continues to outpace in-migration of non-resident discharges.** Out-migration of Vermont resident discharges to hospitals in New Hampshire, New York and Massachusetts totaled 11,178 in 2009. 7,986 of the Vermont resident discharges were from Dartmouth Hitchcock Medical Center in NH. In-migration of non-resident discharges into Vermont hospitals totaled 6,494 (Sections III and X).

For information on in-migration and out-migration for inpatient hospital services for 2005 through 2008, see the “**Vermont Hospital Migration Reports**” at: <http://www.bishca.state.vt.us/health-care/research-data-reports/vermont-hospital-migration-report-vhmr>

For information on utilization of outpatient hospital services, see the “**Vermont Hospital Utilization Report - Outpatient**” at: <http://www.bishca.state.vt.us/health-care/research-data-reports/vermont-hospital-utilization-reports-vhur>.

## Inpatient Highlights

---

### Trends in Utilization: Discharge Rates

The age-adjusted discharge rate measures how often hospital care is provided on a population basis adjusting for differences in age.

- **The age-adjusted Vermont inpatient discharge rate declined from 1990 to 2009.** Vermont’s inpatient hospitalization rate decreased significantly (-29.3 %) during this time period. The downward trend is due in part to the shift of treatment and procedures to the outpatient setting. In 2009, the Vermont age-adjusted rate decreased to 77.1, the lowest point per 1,000 in this time period.
- **The Vermont inpatient discharge rates are lower than overall U.S. rates.** Vermont’s discharge rate was significantly lower than the overall U.S. rate every year from 1990-2009, and slightly lower than the U.S. “white” rate from 2002-2007. These rates were similar in 2008, and Vermont’s rate was again lower than the U.S. “white” rate in 2009. Since Vermont’s population is less racially diverse than the overall national profile, the U.S. “white” rates are more comparable.

## Inpatient Highlights

---

### Trends in Utilization: Average Length of Stay

The age-adjusted average length of stay is an approximate measure of the resources used per discharge, adjusting for differences in age.

- **Vermont’s age-adjusted average length of stay continues to decline.** Vermont’s average length of stay dropped significantly (-31.8%) from 1990-2009, due in part to the shift from inpatient to outpatient and community-based settings for health care services, and changes in reimbursement and cost containment strategies. Similar drops occurred for the overall U.S. Rate (-26.2%) and the U.S. “White” rate (-25.0%) from 1990-2009.

Figure 3

Data Source: National Health Care Surveys - National Hospital Discharge Survey (NHDS)  
While records for newborn discharges are excluded, maternal records for deliveries are included

## Inpatient Highlights

### Inpatient Hospital Utilization: Hospital Service Area

- **Utilization decreased between 2000 and 2009.** The number of age-adjusted discharges per 1000 residents between 2000 and 2009 decreased for the state as a whole, although there were increases in three of the Hospital Service Areas.
- **In 2009, the Rutland HSA had the highest age-adjusted discharge rate of 108.0 per 1000.** The Morrisville HSA had the lowest rate of 66.9. Other than the Burlington HSA in 2007, the Morrisville HSA has maintained the lowest age-adjusted discharge rate since 2003.
- **From 2000 to 2009, the Springfield HSA has the largest decrease in age-adjusted discharges per 1000, at 23.8,** followed by the Newport and Morrisville HSAs with decreases of 22.6 and 22.0 discharges per 1000 respectively.

## Inpatient Highlights

---

### Reason for Hospitalization: Top Five MDCs for Discharges

MDCs (Major Diagnostic Categories) are 25 categories of related diagnoses that collapse over 700 detailed groupings called Medicare Severity Diagnosis Related Groups (MS-DRGs).

- **The top five MDCs** accounts for about 63% of all hospitalizations of Vermont residents in 2009.
- **Among these five MDCs, the most dramatic change** is the continued increase of Respiratory hospitalizations, from 9.0% in 1990 to 12.5 % in 2009.
- **Among these five MDCs, the most significant trend since 2000** was the coverall decline in Heart & Circulatory through 2009.
- **Pregnancy and Childbirth** dropped significantly from 1990 to 2000 and increased slightly from 2000 to 2009.
- **Musculoskeletal** dropped from 1990 to 2000, but has increased steadily from 2000 to 2009.

Figure 6

---

## Inpatient Highlights

---

### In- and Out-migration: Numbers of Inpatient Discharges

In-migration of non-resident discharges from Vermont hospitals has declined from 2001 to 2009, while out-migration of Vermont resident discharges from New Hampshire, Massachusetts and New York hospitals continues to increase and to exceed the number of in-migration discharges. The number of Vermont resident discharges from Vermont hospitals has also declined.

# **User's Guide to Inpatient Tables**

# User's Guide to Inpatient Tables

## Inpatient Data Collection in Vermont

Inpatient discharge data have been the core of the Vermont hospital utilization reports since 1975. These data have been helpful in hospital planning and have provided a longitudinal view of hospital utilization and the health of Vermonters.

## Units of Measure

The inpatient sections use three measures of hospital utilization:

A *discharge* is an individual inpatient hospitalization. Discharge dates, not admission dates, are used to indicate when a case is reported. A count of discharges measures how often care is sought. The same individual will be counted as more than one discharge if hospitalized more than once during the time studied.

A *patient day* is defined as a stay in a hospital for all or part of a day. Patient days are one way of measuring the amount of care provided.

The *average length of stay* is the total patient days divided by the number of discharges in a selected category. It is a rough measure of the amount of care provided during a typical hospital stay.

## Hospital Service Area Analyses

The majority of the ten inpatient Sections compare data on residents of hospital service areas (HSAs). Each HSA is defined by the geographically distinct population of Vermonters who are highly dependent on a hospital or group of hospitals. Each inpatient record is assigned to an HSA. This permits comparison of hospital utilization

patterns for residents of the various HSAs, regardless of where they are hospitalized.

Statistics for HSA analyses include population-based rates that are adjusted for differences in population characteristics, such as age distribution, from one HSA to another. Using population-based rates, especially age-adjusted rates, differences in hospitalization patterns for residents of different regions of the state can be identified. Two detailed examples are presented on pages 29-31.

HSAs are less relevant for certain services that have historically been regionalized, such as acute inpatient mental health services for persons with severe mental illness. In 2009, four out of the fourteen Vermont community hospitals had dedicated inpatient psychiatric units in addition to Brattleboro Retreat Healthcare and the Vermont State Hospital.

Hospitals take interest in HSAs because residents of their HSAs are usually their principal Vermont consumers. Analysis of anomalies and trends within its service area can aid a hospital in identifying practice variations and in strategic planning. Finally, the size and shape of an HSA can be indicative of a hospital's market penetration and the environment in which it operates.

Vermont hospitals near Vermont's borders may provide care to people in neighboring, non-Vermont towns. However, out-of-state residents are excluded from the population-based HSA comparisons. In order to include out-of-state residents in a hospital service area, information would need to be collected on all hospitalizations of the residents in those areas, including use of non-Vermont hospitals. In contrast to the HSA comparisons, out-of-state residents using Vermont hospitals are included in the hospital-based comparisons.

While hospitals may provide the majority of care within their service area, a substantial quantity of the care received by the population may also come from other hospitals. If the hospital is a regional referral center, the hospital may be providing the majority of care to residents within its service area while also providing specialty care to residents from other service areas.

#### ***Fourth Version of Hospital Service Areas***

Due to changes in technology, financing and reimbursement, population characteristics, and the economy, the health care system serving Vermonters constantly changes. The hospital service area (HSA) definitions used in the Reports have been modified three times to reflect changing discharge patterns.

Starting with the 2002 Report, HSAs are based on inpatient discharges, where the diagnosis indicated the need for immediate care, for the years 1997-2001. Prior definitions of HSAs have been based on all inpatient stays (except for newborns) and have used a strict decision rule for inclusion of ZipTowns which are towns or groups of towns (see definition below for ZipTowns) in a hospital's service area. Use of a strict inclusion rule meant that there were always towns that were not assigned to any HSA and were labeled "contested."

In preparing for this fourth version of HSAs, rules used to define the 3<sup>rd</sup> version of HSAs were applied to 1997-2001 data. The number of contested towns rose from 54 to 80, nearly a third of all Vermont towns. This resulted in the loss of one hospital service area and a serious erosion of others. As a result of this increase in contested towns, two major changes were made to the process of defining HSAs. In addition to these definitional changes, HSA names were changed. To distinguish these new HSAs from previous ones, HSAs were given the name of the most populous town in their area.

The first major change was that selection of records was limited to those discharges with diagnoses considered to require immediate

hospitalization as described by Newton and Goldacre in their 1994 article, "How many patients are admitted in districts other than their own, and why?" (Journal of Public Health Medicine, 1994, Vol. 16, No. 2, pp. 159-164). Newton and Goldacre used records of patients with acute conditions that require immediate hospitalization, because patients with these conditions tend to go to the hospital nearest to them when they become ill. The authors excluded newborns and patients transferred from another hospital. The authors included records with the following acute conditions as their primary diagnoses:

appendicitis (ICD-9-CM codes 530-543),  
abscess of anal and rectal regions (ICD-9-CM codes 566),  
peritonitis (ICD-9-CM codes 567),  
acute myocardial infarction (ICD-9-CM codes 410),  
pneumococcal pneumonia (ICD-9-CM codes 481), and  
asthma (ICD-9-CM codes 493).

The second major change was the shift to a plurality rule in assigning ZipTowns to HSAs, so that all towns are assigned to an HSA with none remaining contested. ZipTowns are towns or groups of towns with over 1,000 residents and relatively contained ZIP code boundaries (see Appendix E for a list of ZipTowns in each HSA). ZipTowns were assigned to hospital service areas as follows:

- 1) If the plurality of a ZipTown's discharges were from a Vermont hospital or Dartmouth Hitchcock Medical Center (DHMC) in Lebanon, New Hampshire, the ZipTown was assigned to that hospital's service area.
- 2) If the plurality of a ZipTown's discharges were from a non-Vermont hospital other than DHMC, the ZipTown was assigned to the HSA of the Vermont hospital (or DHMC) with the next highest number of discharges.

One ZipTown called Guildhall, made up of five towns in Essex County which were previously designated as contested, had only four discharges to a nearby Vermont hospital. All four discharges were

Lunenburg residents discharged from Northeastern Vermont Regional Hospital in St. Johnsbury. Using the plurality rule, Lunenburg was added to the Burke area ZipTown which is assigned to the St. Johnsbury HSA. The remaining four towns in the Guildhall ZipTown had no discharges to a nearby Vermont hospital. These four towns were assigned to HSAs based on a decision to follow the boundaries used for the Health Department’s Community Public Health District Offices. Using this approach, Guildhall and Maidstone were also assigned to the Burke area ZipTown in the St. Johnsbury HSA. The remaining towns of Bloomfield and Brunswick were assigned to the Canaan area ZipTown in the Newport HSA.

The HSAs continue to include two multi-hospital areas: the White River Junction HSA (Dartmouth Hitchcock Medical Center, Mt. Ascutney Hospital, and the Veterans Administration Hospital) and the Brattleboro HSA (Brattleboro Memorial Hospital and Grace Cottage Hospital). These HSAs include multiple hospitals because resident hospitalizations are split among the hospitals with no clear majority of inpatient discharges concentrated at any one hospital.

Color maps of HSAs and a complete description of the process used to define the current service areas are found in the *2002 Vermont Hospital Monograph Companion*. Black and white maps of Vermont towns and HSAs are also shown on page 9 of the Introduction to this report.

***Hospital Service Area Analyses Using Population-Based Rates***

The rates reported in this volume combine information about hospitalizations and information about populations “at risk” of being hospitalized. Rates enable the comparison of areas that differ in population and HSAs are the population areas used in these comparisons.

Simple or “crude” rates are typically expressed as the number of events per some large number of people, such as 1,000. This rate is called *crude* because it only compensates for relative population size. *Adjusted*

rates incorporate additional variables, such as age, into the calculation.

For example, the “crude” discharge rate for residents of an HSA would be calculated by multiplying 1,000 times the following:

$$\frac{\text{hospitalizations of HSA residents in any VT, MA, NH, or NY hospital}}{\text{population of the HSA}}$$

To compare hospitalizations for Heart and Circulatory Diseases (MDC 5) in two HSAs, Burlington and Rutland, the number of hospitalizations (the numerator for the rate) would need to be established:<sup>1</sup>

***Discharges for Heart and Circulatory Diseases, 2009***

Burlington HSA	1,677
Rutland HSA	1,133

Although more residents of the Burlington HSA are hospitalized for these conditions, it is not possible to answer the question of whether heart and circulatory diseases are a more significant problem for residents of the Burlington HSA. In order to answer this question, the number of people living in these two HSAs (the denominator for the rate) is needed.<sup>2</sup>

***Population Estimates, 2009***

Burlington HSA	171,735
Rutland HSA	63,819

---

<sup>1</sup>Number of discharges by HSA and MDC are found in Sections V & VI.

<sup>2</sup>Population numbers are found in Section I.

The Burlington HSA has more than twice the population of the Rutland HSA. Given the greater population in the Burlington HSA, more discharges would be expected, even if all other variables (such as health status and the practice style of area physicians) were equal.

In order to remove the effect of the different population size, the rate is used instead of the count. The crude rates for the Burlington and Rutland HSAs provide a different picture from the counts:<sup>3</sup>

***Crude Discharge Rates per 1,000 HSA Residents, 2009  
Heart and Circulatory Diseases***

Burlington HSA	9.8
Rutland HSA	17.8

Although the Burlington HSA had more Heart and Circulatory discharges, the discharge rate of the Burlington HSA is much lower than that of Rutland's. That is, a resident of the Rutland HSA is more than one and a half times more likely to be hospitalized for heart disease as a resident of the Burlington HSA.

These crude rates are valuable for comparing rates over limited time periods or among similar populations. However, the utility of crude rates is limited because of the link between health status and age. In general, older people use more hospital resources than do younger people.

To make comparisons among health care systems, the effect of different age distributions needs to be removed from these comparisons. In the example above, if the average age in Burlington were 30 and the average age in Rutland were 55, the difference in rates would not be surprising. However, if the average ages in the two service areas were the same, other explanations would be considered, such as differences

in health status, risk factors and/or provision of care. The issue can be examined by computing age-adjusted rates. Different standards, such as the projected year 2000 U.S. population, can be used for age-adjusting and different age groups can be used in the age adjustment procedure. This volume uses the overall Vermont age distribution when adjusting HSA rates. See Appendix A for a more complete description of the age-adjustment process used in this report.

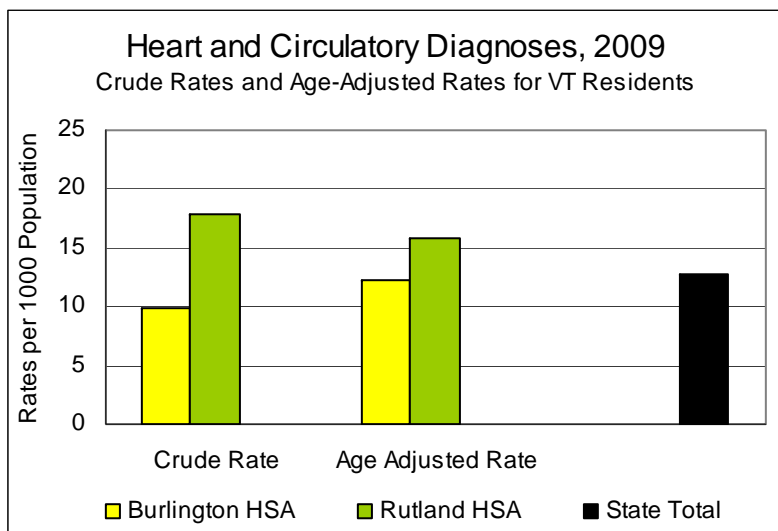

To illustrate the rationale for age adjusting, consider the 2009 population distribution of the Burlington and Rutland HSAs and the state as a whole shown below. The Burlington HSA has a younger age profile than the Rutland HSA, with a larger proportion of its population in the 15-44 age category, and a smaller proportion aged 45 and above.

Age adjusting eliminates the effect of these differing age distributions on the discharge rates.

<sup>3</sup>Crude rates by HSA and MDC are found in Sections V & VI.

When the age-adjusted heart and circulatory discharge rates of the two HSAs are compared, the differences seen in the crude rates become smaller. Burlington HSA's low rate of heart and circulatory discharges was due, in part, to its younger population. Rutland HSA's higher rate was due, in part, to its older population.<sup>4</sup> Remaining differences may be attributable to differences in underlying health status, risk factors and/or practice patterns.

While heart and circulatory disorders are most common among older populations, delivery and abortion occur almost entirely among women aged 15-44. For this diagnostic category, therefore, the Burlington HSA would be expected to have a higher crude rate than the Rutland HSA due to its younger population. The chart below shows that this is the case. When we take the age structure of the population into account by age-adjusting, we find that the Burlington HSA rate is lower than the Rutland rate.

<sup>4</sup>Age-adjusted rates are found in Section 5.

## Hospital-Based Analyses

Some questions require a comparison of hospitals rather than HSAs. Hospital-based analysis is useful for understanding overall hospital utilization. Hospital-based analyses include all people served by the hospital, whether they are Vermont residents or not. Sections II, III, IV, VII, VIII and IX provide various statistics by hospital.

Section II, for example, gives a comprehensive summary of utilization by hospital. The first page of the Section provides a one-page snapshot of all Vermont hospitals plus Dartmouth Hitchcock Medical Center, including total discharges, total patient days, and average length of stay. The remaining pages of Section II present additional detail by hospital for these measures by Major Diagnostic Category (MDC).

The example below uses data from Section II to compare hospitalizations for Heart and Circulatory diagnoses (MDC 5) at Fletcher Allen Health Care and at Rutland Regional Medical Center.

*Number of Patient Days, 2009  
Heart and Circulatory Diseases*

Fletcher Allen Health Care	15,657
Rutland Regional Medical Center	3,058

For heart and circulatory diagnoses, Fletcher Allen Health Care provided more than six times as many days of hospitalization as Rutland Regional Medical Center. This difference can be a result of seeing more patients, keeping patients in the hospital longer, or a combination of the two.

In order to determine the contribution of these two factors, the number of heart and circulatory patient days can be divided by the number of heart and circulatory discharges to produce the average length of stay for heart and circulatory hospitalizations.

*Average Length of Stay (Days), 2009  
Heart and Circulatory Diseases*

Fletcher Allen Health Care	4.2
Rutland Regional Medical Center	3.8

At Fletcher Allen Health Care, heart and circulatory patients stay an average of 4.2 days, longer than patients at Rutland Regional Medical Center who stay an average of 3.8 days. One could reasonably ask whether the patients at Fletcher Allen Health Care are sicker or if the care is less efficient. Researchers have used a variety of tools, such as measures of severity of illness, to answer such questions. This volume does not attempt to answer questions about hospital performance or health of populations. Its purpose is to provide the data that illuminate patterns and evoke questions for further study.

## **Hospital-Based Analysis Compared with Hospital Service Area Analysis**

Various Sections report both hospital-based and HSA data. Section II provides, in addition to the hospital utilization data described above, comparisons of data for hospitals and their HSAs. For example, average length of stay for each hospital is listed next to the average length of stay statistic for its HSA.

Discharge and patient day rates per 1,000 population are provided for each hospital's HSA along with the percent of those discharges and patient days provided by that hospital. In 2009, Fletcher Allen Health Care provided the highest percentage of care to residents of its HSA, accounting for 93.2% of the discharges for residents in its HSA and 93.3% of the patient days. Rutland Regional Medical Center was second highest, as the provider of 75.6% of the discharges and 74.7% of the patient days for people who live in its service area.

Data on the extent to which hospitals provide care primarily to residents of their service area are also provided in Section II. Among HSAs with a single hospital, the 2009 data show that North Country Hospital was highest on this measure, with 94.4% of their discharges being people who reside in their HSA. Fletcher Allen Health Care had the lowest percent on this measure, with only 52.5% of their discharges being people residing in their local service area. Thus, 47.5% of Fletcher Allen's discharges were people from other parts of Vermont or out of state.

Section VIII presents data based on hospital service area, but with additional detail as to which hospital residents from a given HSA were receiving care.

For example, in the Barre HSA, 76.3% of hospitalizations for Respiratory Disease were from the Central Vermont Medical Center. However, for Heart & Circulatory Disease, 35.8% of the discharges were from Fletcher Allen Health Care, 33.0% were from Central Vermont Medical Center, and 25.2% were from Dartmouth Hitchcock Medical Center.

## **Population**

Population estimates for 2005-2009 used in the inpatient report were created by VDH using adjustments to the National Center for Health Statistics population estimates.

Population data are presented in Section I by HSA. These population statistics are used as the basis for all rates presented in the remaining report.

## **Changes in 2008 and 2009**

Prior to 2008, the Dartmouth Hitchcock Psychiatric Unit reported inpatient discharges as a separate facility. Beginning with the 2008 data, these discharges are included in the Dartmouth Hitchcock Medical Center discharges. This change is reflected in Dartmouth's increased hospital share for mental health discharges as seen in Section II.

Beginning with the 2009 data, Section X of this report includes information on hospital discharges for Vermont residents seeking inpatient care in out-of-state hospitals in New Hampshire, Massachusetts and New York ("out-migration"), and on out-of-state residents seeking inpatient care in Vermont hospitals ("in-migration"). More comprehensive reports on in- and out-migration patterns for 2005 through 2008 are available at <http://www.bishca.state.vt.us/health-care/research-data-reports/vermont-hospital-migration-report-vhmr> .

SPRINGFIELD HOSPITAL	512.9	112.3	43.5	48.8	9,616	2,131	72.5	4.6	4.5

All data exclude newborns.

All rates in this section are crude rates. See Section V for age-adjusted rates.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

Beginning in 2008, Dartmouth Hitchcock Medical Center includes discharges from the Dartmouth Hitchcock Psychiatric Unit. Prior years treated Dartmouth Hitchcock Psychiatric Unit as a separate facility and their discharges were included with other NH hospitals.

All data exclude newborns. Data may not add to totals due to rounding or missing values.

All rates in this section are crude rates. See Section V for age-adjusted rates.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

PERCENT WITH DIAG. is the portion of all discharges from this hospital in the indicated diagnostic category.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

\*Sex-specific population used in rate calculation.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

All data exclude newborns. Data may not add to totals due to rounding or missing values.

All rates in this section are crude rates. See Section V for age-adjusted rates.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

PERCENT WITH DIAG. is the portion of all discharges from this hospital in the indicated diagnostic category.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

\*Sex-specific population used in rate calculation.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

All data exclude newborns. Data may not add to totals due to rounding or missing values.

All rates in this section are crude rates. See Section V for age-adjusted rates.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

PERCENT WITH DIAG. is the portion of all discharges from this hospital in the indicated diagnostic category.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

\*Sex-specific population used in rate calculation.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

PERCENT WITH DIAG. is the portion of all discharges from this hospital in the indicated diagnostic category.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

\*Sex-specific population used in rate calculation.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

All data exclude newborns. Data may not add to totals due to rounding or missing values.

All rates in this section are crude rates. See Section V for age-adjusted rates.

AREA DAY RATE is the number of days of hospitalization per 1000 population accumulated by the population of the HSA.

AREA DISCHARGE RATE is the number of discharges per 1000 population accumulated in the HSA.

HOSP. SHARE DAYS is the percentage of days accumulated by the HSA population that were at this hospital.

HOSP. SHARE DISCH is the percentage of discharges of residents of the HSA that were from this hospital.

HOSP. TOTAL DAYS is the total number of patient days recorded at this hospital regardless of patient origin.

HOSP. TOTAL DISCH is the total number of discharges from this hospital regardless of patient origin.

PERCENT FROM HSA is the portion of all discharges from this hospital who were residents of this HSA.

PERCENT WITH DIAG. is the portion of all discharges from this hospital in the indicated diagnostic category.

AVERAGE LENGTH OF STAY - AREA is the average number of days per discharge for all residents of this HSA, regardless of hospital.

AVERAGE LENGTH OF STAY - HOSP is the average number of days per discharge for all users of this hospital, regardless of origin.

\*Sex-specific population used in rate calculation.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published in earlier reports. See the User's Guide to Inpatient Tables for details.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.  
 The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.  
 The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.  
 The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

\*Sex-specific population used in rate calculation.

Totals	0.9	0.9	0.9	0.9	0.9	7.6	6.8	6.2	6.8	7.5

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.  
 The Veterans Administration in White River Junction stopped submitting records after June 20, 2006. Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002 Monograph. Numbers reported here are not directly comparable to those published before 2002.

See the User's Guide to Inpatient Tables for details.

The Veterans Administration in White River Junction stopped submitting records after June 20, 2006.

Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

Use of HSA definitions based on 1997-2001 inpatient immediate care discharges began with the 2002

Monograph. Numbers reported here are not directly comparable to those published before 2002.

See the User's Guide to Inpatient Tables for details.

The Veterans Administration in White River Junction stopped submitting records after June 20, 2006.

Therefore, 2006 - 2009 discharges and rates may be underestimated for the White River Jct. HSA and, to a lesser degree, for the Springfield and Randolph HSAs. Discharges for Major Diagnostic Categories, Male Reproductive and Substance Abuse, also may be underestimated.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

This table includes Vermont residents only.

Use of HSA definitions based on 1997-2001 immediate care inpatient discharges began in 2002. Numbers reported here are not directly comparable to those published before 2002. See the User's Guide to Inpatient Tables for details.

%Cases is the percent of all cases from this hospital service area which were discharged from this hospital. %SURG is the percent of cases from this HSA and hospital which had a surgical procedure. Total of individual MDCs may not equal ALL DIAGNOSES due to missing MDC values.

The Veterans Administration stopped providing data June 30, 2006.

New York Hospitals	776	1.5%	\$ 40,882,911	3.5%	\$ 52,684	2.03
Vermont Residents in Vermont Hospitals Total	41,057	78.6%	\$ 769,495,202	65.0%	\$ 18,742	1.29
Vermont Residents in Out-Of-State Hospitals Total	11,178	21.4%	\$ 413,742,927	35.0%	\$ 37,014	1.81
Vermont Resident Hospitalization Totals	52,235	100.0%	\$ 1,183,238,129	100.0%	\$ 22,652	1.40

Note: VT residents use hospitals in other states in addition to NH, NY and MA, but reporting on this is currently unavailable.  
 This table is limited to inpatient discharges due to inconsistent reporting across states regarding outpatient and emergency department discharges.

\* Average DRG Wt - Every VT resident discharge is assigned to one of over 500 DRGs using the U.S. Health Care Financing Administration's Grouper system. Each DRG has a numeric weight reflecting the national "average hospital resource consumption" by patients for that DRG, relative to the national "average hospital resource consumption" of all patients. A weight of 1.0 represents a DRG which uses average resources. DRG weights are published each fall in the Federal Register and are based on resource consumption by Medicare patients. The Average DRG Wt was calculated by averaging the DRG weights for Vermont residents discharged within the calendar year (excluding newborn and VA Hospital discharges). This methodology was applied to all payers, including Medicaid, Medicare, commercial, and self-pay.

**Data Source: Vermont Uniform Hospital Discharge Data Set**

This page is intentionally blank

## ■ Appendices

## APPENDIX A Definitions and Formulae

**Average Length of Stay (ALOS):** The arithmetic mean days of stay in hospital for the selected group of discharges:

$$\text{Avg. Length of Stay} = \frac{\text{Total Number of Patient Days in the Selected Group}}{\text{Total Number of Discharges in the Selected Group}}$$

**Charges:** Charges in this report are defined as hospital "facility" charges that are calculated by subtracting professional fees and patient convenience items charges from the total charge. However, facility charge data are not always reported according to the strict definition and some hospitals may have included salaried and contracted physician fees in their facility charges. Inpatient charges less than \$100 are set to missing.

**Clinical Classifications Software (CCS) Grouper:** CCS was developed at the Agency for Healthcare Research and Quality (AHRQ) and is available at the website: <http://www.ahrq.gov/data/hcup/ccs.htm>. CCS collapses principal diagnosis and procedure codes into meaningful categories. The single-level diagnosis CCS aggregates illnesses and conditions into more than 260 categories. Similarly, the single-level procedure CCS aggregates procedures into 231 categories, most representing single types of procedures. High level CCS groups further collapse single-level CCS into broad groups based on body systems or condition categories.

**Diagnosis:** The condition, determined after study, which occasioned the patient's admission to the hospital. The accuracy or reliability of the diagnosis depends on several factors including the physician's understanding of the problem and the recorder's ability to fit this to established coding conventions. For those cases with multiple problems,

the primary diagnosis may not be the reason for surgery or cause of death.

**Diagnosis Related Group (DRG), MS-DRG:** A classification system that groups patient discharges into more than 500 (DRG) or more than 900 (MS-DRG) categories according to diagnosis, type of treatment, age, and other relevant criteria. Under the prospective payment system, hospitals are paid a set fee for treating Medicare beneficiaries in a single DRG category, regardless of the actual cost of care for the individual. See Appendix C for a complete listing of DRGs.

**Discharge:** The equivalent of a hospital admission, except that for a specified time period, only those cases discharged are counted. Note that discharges do not necessarily reflect disease incidence or prevalence, just the fact of utilization of the hospital resource. Maternal records are included, but newborn records are excluded from the inpatient dataset, to avoid duplicate counts. However, newborn records are retained in the Vermont Uniform Hospital Discharge Dataset.

**Emergency Department (ED) Dataset:** Consists of all records that had an associated revenue code beginning 45 (Emergency Room).

**Hospital Service Area (HSA):** A group of Vermont ZipTowns (see definition of ZipTown below) based on each ZipTown's use of hospital resources. Starting in 2002, HSAs are based on inpatient discharges, where the diagnosis indicated the need for immediate care, for the years 1997-2001. In this fourth version of HSAs, ZipTowns were assigned to HSAs based on a plurality rule. Prior definitions of HSAs have been based on all inpatient stays (except for newborns) and have used a strict decision rule for inclusion of ZipTowns in a hospital's service area. Use of a strict inclusion rule meant that there were always towns that were not assigned to any HSA and were labeled "contested." In this fourth version of HSAs, no towns are considered contested. See the

Introduction for a map of HSAs and the User's Guide to Inpatient Tables for an in-depth discussion of ZipTowns and HSAs.

Two HSAs contain more than one hospital: White River Junction (Dartmouth Hitchcock Medical Center, Mt. Ascutney Hospital, and the Veterans Administration Hospital) and Brattleboro (Brattleboro Memorial Hospital and Grace Cottage Hospital).

**Inpatient Dataset:** Consists of discharge records that were billed as an inpatient stay. Maternal records are included, but newborns are excluded, to avoid duplicate counts. However, newborn records are retained in the Vermont Uniform Hospital Discharge Dataset.

**Major Diagnostic Category (MDC):** The aggregation of DRGs into 25 groups that define major body systems. See Appendices B and C for a list of MDCs and related DRGs.

**Market Share:** An individual hospital's share of the total hospital utilization of a given area, expressed as a percentage.

**Outpatient Procedures Dataset:** Consists of outpatient records with a procedure in the ICD-9-CM code range of 00.0-86.00 that were performed in an operating room, ambulatory surgery area, or other outpatient setting.

**Patient Day:** A stay in hospital for all or part of a day.

**Population-based Rate:** The rate of a population's use of hospital inpatient services. Rates in this report represent hospital discharges or days per 1,000 population for the selected group.

The *crude rate* is calculated as follows:

$$\text{Crude Rate per 1,000 People} = \frac{\text{Number of Discharges or Patient Days For the Selected Group}}{\text{Total Population for the Selected Group}} \times 1,000$$

These rates depend upon the accuracy of both the numerator and the denominator population. Data on population-at-risk (the denominator in these rates) are based on estimates. Rates for small areas or for groups with small numerators should be used with caution.

**Age-adjusted rates** are particularly important for comparisons across areas because service areas have different population age mixes and age is a strong factor influencing hospitalization patterns. The age-adjusted rate for a given hospital service area is calculated by multiplying the area's age specific rate for each age group by the state population in that age group, summing across age groups, and dividing the result by the total state population. This result is then multiplied by 1,000. The following age groups are used in this volume for the computation of age-adjusted rates: 0-4, 5-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-69, 70-74, 75-79, and 80+. In other publications or when comparing to national rates, different standards, such as the projected year 2000 U.S. population, are used for age adjusting and different age groupings may also be used in the age adjusting process.

**Principal Payer:** The anticipated principal source of payment of the patient's hospital bill recorded by the hospital on each discharge record.

**ZipTown Grouping:** The combination of towns into groups with compatible town and Zip code boundaries to reconcile discrepancies between mailing address and town of residence. Towns are also grouped to achieve a minimum population of 1000 persons in each Zip Town group. ZipTowns were updated in 1996, with minor adjustments in 2004. This volume reflects these changes.

**APPENDIX B**  
**Major Diagnostic Categories (MDCs)**

1	Diseases and disorders of the nervous system
2	Diseases and disorders of the eye
3	Diseases and disorders of the ear, nose, mouth and throat
4	Diseases and disorders of the respiratory system
5	Diseases and disorders of the circulatory system
6	Diseases and disorders of the digestive system
7	Diseases and disorders of the hepatobiliary system (liver) and pancreas
8	Diseases and disorders of the musculoskeletal system and connective tissue
9	Diseases and disorders of the skin, subcutaneous tissue and breast
10	Endocrine, nutritional and metabolic diseases and disorders
11	Diseases and disorders of the kidney and urinary tract
12	Diseases and disorders of the male reproductive system
13	Diseases and disorders of the female reproductive system
14	Pregnancy, childbirth, and the puerperium
15	Newborns and other neonates with conditions originating in the perinatal period <i>-- excluded from tables in this monograph</i>
16	Diseases and disorders of the blood and blood-forming organs and immunological disorders
17	Myeloproliferative diseases and disorders and poorly differentiated neoplasms
18	Infectious and parasitic diseases
19	Mental diseases and disorders
20	Alcohol/drug use and alcohol/drug-induced organic mental disorders
21	Injuries, poisonings, and toxic effects of drugs
22	Burns
23	Factors influencing health status and other contacts with health services
24	Multiple significant trauma
25	Human immunodeficiency virus infections

- 871 M Septicemia w/o MV 96+ hours w MCC
- 872 M Septicemia w/o MV 96+ hours w/o MCC

**MDC 19: Mental Diseases and Disorders**

- 876 S O.R. procedure w principal diagnoses of mental illness
- 880 M Acute adjustment reaction & psychosocial dysfunction
- 881 M Depressive neuroses
- 882 M Neuroses except depressive
- 883 M Disorders of personality & impulse control
- 884 M Organic disturbances & mental retardation
- 885 M Psychoses
- 886 M Behavioral & developmental disorders
- 887 M Other mental disorder diagnoses

**MDC 20: Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental**

- 894 M Alcohol/drug abuse or dependence, left ama
- 895 M Alcohol/drug abuse or dependence w rehabilitation therapy
- 896 M Alcohol/drug abuse or dependence w/o rehabilitation therapy w MCC
- 897 M Alcohol/drug abuse or dependence w/o rehabilitation therapy w/o MCC

**MDC 21: Injuries, Poisonings, and Toxic Effects of Drugs**

- 901 S Wound debridements for injuries w MCC
- 902 S Wound debridements for injuries w CC
- 903 S Wound debridements for injuries w/o CC/MCC
- 904 S Skin grafts for injuries w CC/MCC
- 905 S Skin grafts for injuries w/o CC/MCC

**APPENDIX C**

**Major Diagnostic Categories (MDCs) and Diagnosis Related Groups (MS\_DRGs), Effective 10/1/2007 - 9/30/2010**

**M= Medical S= Surgical CC=Complications or Comorbidities MCC=Major Complications or Comorbidities**

855 S Infectious & parasitic diseases w O.R. procedure w/o CC/MCC

**MDC 21: Injuries, Poisonings, and Toxic Effects of Drugs**

- 907 S Other O.R. procedures for injuries w MCC
- 908 S Other O.R. procedures for injuries w CC
- 909 S Other O.R. procedures for injuries w/o CC/MCC
- 913 M Traumatic injury w MCC
- 914 M Traumatic injury w/o MCC
- 915 M Allergic reactions w MCC
- 916 M Allergic reactions w/o MCC
- 917 M Poisoning & toxic effects of drugs w MCC
- 918 M Poisoning & toxic effects of drugs w/o MCC
- 919 M Complications of treatment w MCC
- 920 M Complications of treatment w CC
- 921 M Complications of treatment w/o CC/ MCC
- 922 M Other injury, poisoning & toxic effect diag w MCC
- 923 M Other injury, poisoning & toxic effect diag w/o MCC

**MDC 22: Burns**

- 927 S Extensive burns or full thickness burns w MV 96+ hrs w skin graft
- 928 S Full thickness burn w skin graft or inhal inj w CC/MCC
- 929 S Full thickness burn w skin graft or inhal inj w/o CC/MCC
- 933 M Extensive burns or full thickness burns w MV 96+ hrs w/o skin graft
- 934 M Full thickness burn w/o skin grft or inhal inj
- 935 M Non-extensive burns

**MDC 23: Factors Influencing Health Status and Other Contacts with Health**

**Services**

- 939 S O.R. proc w diagnoses of other contact w health services w MCC
- 940 S O.R. proc w diagnoses of other contact w health services w CC
- 941 S O.R. proc w diagnoses of other contact w health services w/o CC/MCC
- 945 M Rehabilitation w CC/MCC
- 946 M Rehabilitation w/o CC/MCC
- 947 M Signs & symptoms w MCC
- 948 M Signs & symptoms w/o MCC
- 949 M Aftercare w CC/MCC
- 950 M Aftercare w/o CC/MCC
- 951 M Other factors influencing health status

906 S Hand procedures for injuries

**MDC 24: Multiple Significant Trauma**

- 955 S Craniotomy for multiple significant trauma
- 956 S Limb reattachment, hip & femur proc for multiple significant trauma
- 957 S Other O.R. procedures for multiple significant trauma w MCC
- 958 S Other O.R. procedures for multiple significant trauma w CC
- 959 S Other O.R. procedures for multiple significant trauma w/o CC/MCC
- 963 M Other multiple significant trauma w MCC
- 964 M Other multiple significant trauma w CC
- 965 M Other multiple significant trauma w/o CC/MCC

**MDC 25: Human Immunodeficiency Virus Infections**

- 969 S HIV w extensive O.R. procedure w MCC
- 970 S HIV w extensive O.R. procedure w/o MCC
- 974 M HIV w major related condition w MCC
- 975 M HIV w major related condition w CC
- 976 M HIV w major related condition w/o CC/MCC
- 977 M HIV w or w/o other related condition

**Pre-MDC**

- 1 S Heart transplant or implant of heart assist system w MCC.
- 2 S Heart transplant or implant of heart assist system w/o MCC.
- 3 S ECMO or trach w MV 96+ hrs or PDX exc face, mouth & neck w maj O.R
- 4 S Trach w MV 96+ hrs or PDX exc face, mouth & neck w/o maj O.R
- 5 S Liver transplant w MCC or intestinal transplant
- 6 S Liver transplant w/o MCC
- 7 S Lung transplant
- 8 S Simultaneous pancreas/kidney transplant
- 9 S Bone marrow transplant
- 10 S Pancreas transplant
- 11 S Tracheostomy for face,mouth & neck diagnoses w MCC
- 12 S Tracheostomy for face,mouth & neck diagnoses w CC
- 13 S Tracheostomy for face,mouth & neck diagnoses w/o CC/MCC

MS-DRGs classified as Pre-MDC are not assigned a specific MDC and these MS-DRGs may be associated with multiple MDCs.

## APPENDIX C

### Major Diagnostic Categories (MDCs) and Diagnosis Related Groups (MS\_DRGs), Effective 10/1/2007 - 9/30/2010

M= Medical S= Surgical CC=Complications or Comorbidities MCC=Major Complications or Comorbidities

#### MS-DRGs Assigned to More than One MDC

981	S	Extensive O.R. procedure unrelated to principal diagnosis w MCC
982	S	Extensive O.R. procedure unrelated to principal diagnosis w CC
983	S	Extensive O.R. procedure unrelated to principal diagnosis w/o CC/MCC
984	S	Prostatic O.R. procedure unrelated to principal diagnosis w MCC
985	S	Prostatic O.R. procedure unrelated to principal diagnosis w CC
986	S	Prostatic O.R. procedure unrelated to principal diagnosis w/o CC/MCC
987	S	Non-extensive O.R. proc unrelated to principal diagnosis w MCC
988	S	Non-extensive O.R. proc unrelated to principal diagnosis w CC
989	S	Non-extensive O.R. proc unrelated to principal diagnosis w/o CC/MCC

#### MS-DRGs that contain cases not assigned to valid MS-DRGs.

998	**	Principal diagnosis invalid as discharge diagnosis
999	**	Ungroupable

**APPENDIX D**  
**Hospitals in this Report**

Vermont Acute Care Hospitals  
(Abbreviations are used in Sections III and IV)

Brattleboro Memorial Hospital  
(BRAT)  
17 Belmont Avenue  
Brattleboro, Vermont 05301

Central Vermont Medical Center  
(CVMC)  
P.O. Box 547  
Barre, Vermont 05641

Copley Hospital  
(COPL)  
528 Washington Highway  
Morrisville, Vermont 05661

Fletcher Allen Health Care  
(FAHC)  
111 Colchester Avenue  
Burlington, Vermont 05401

Gifford Medical Center  
(GIFF)  
44 Main Street, P.O. Box 2000  
Randolph, Vermont 05060

Grace Cottage Hospital  
(GRAC)  
Route 35, P.O. Box 216  
Townshend, Vermont 05353

Mt. Ascutney Hospital and Health Center  
(MT.A)  
289 County Road  
Windsor, Vermont 05089

North Country Hospital  
(NCTY)  
189 Prouty Drive  
Newport, Vermont 05855

Northeastern Vermont Regional Hospital  
(NEVT)  
1315 Hospital Drive, P.O. Box 905  
St. Johnsbury, Vermont 05819

Northwestern Medical Center  
(NWST)  
133 Fairfield Street, P.O. Box 1370  
St. Albans, Vermont 05478

Porter Medical Center  
(PORT)  
115 Porter Drive  
Middlebury, Vermont 05753

Rutland Regional Medical Center  
(RRMC)  
160 Allen Street  
Rutland, Vermont 05701

Southwestern Vermont Medical Center  
(SWVT)  
100 Hospital Drive East  
Bennington, Vermont 05201

Springfield Hospital  
(SPRF)  
25 Ridgewood Road, P.O. Box 2003  
Springfield, Vermont 05156

**APPENDIX D**  
**Hospitals in this Report**

New Hampshire Hospitals  
(Abbreviations are used in Section VIII)

Alice Peck Day Memorial Hospital (NH-Alice Day) Lebanon, New Hampshire	Exeter Hospital (NH-Exeter) Exeter, New Hampshire	Parkland Medical Center (NH-Parkland) Derry, New Hampshire
Androscoggin Valley Hospital (NH-Androscoggin) Berlin, New Hampshire	Franklin Regional Hospital (NH-Franklin) Franklin, New Hampshire	Portsmouth Regional Hospital (NH-Portsmouth) Portsmouth, New Hampshire
Catholic Medical Center (NH-Catholic) Manchester, New Hampshire	Frisbie Memorial Hospital (NH-Frisbie) Rochester, New Hampshire	Southern New Hampshire Medical Center (NH-Southern NH) Nashua, New Hampshire
Cheshire Medical Center (NH-Cheshire) Keene, New Hampshire	Huggins Hospital (NH-Huggins) Wolfeboro, New Hampshire	St. Joseph's Hospital (NH-St. Joseph's) Nashua, New Hampshire
Concord Hospital (NH-Concord) Concord, New Hampshire	Lakes Region General Hospital (NH-Lakes Region) Laconia, New Hampshire	Speare Memorial Hospital (NH-Speare) Plymouth, New Hampshire
Cottage Hospital (NH-Cottage) Woodsville, New Hampshire	Littleton Hospital (NH-Littleton) Littleton, New Hampshire	Upper Connecticut Valley Hospital (NH-Upper CT Val) Colebrook, New Hampshire
Dartmouth Hitchcock Medical Center (NH-Hitchcock) Lebanon, New Hampshire	Memorial Hospital (NH-Memorial) North Conway, New Hampshire	Valley Regional Hospital (NH-Valley Reg.) Claremont, New Hampshire
* Dartmouth Hitchcock Psychiatric Unit (NH-Hitch. Psych) Lebanon, New Hampshire	Monadnock Community Hospital (NH-Monadnock) Peterborough, New Hampshire	Weeks Medical Center Hospital (NH-Weeks) Lancaster, New Hampshire
Elliot Hospital (NH-Elliot) Manchester, New Hampshire	New London Hospital (NH-New London) New London, New Hampshire	Wentworth-Douglass Hospital (NH-Wntwth-Doug) Dover, New Hampshire

\* Beginning in 2008 Dartmouth Hitchcock Medical Center includes discharges from the Dartmouth Hitchcock Psychiatric Unit.

**APPENDIX D**  
**Hospitals in this Report**

Massachusetts Hospitals Most Frequently Used by Vermont Residents  
(Abbreviations are used in Section VIII)

Baystate Medical Center  
(MA-Baystate)  
Springfield, Massachusetts

Franklin Medical Center  
(MA-Franklin Med)  
Greenfield, Massachusetts

North Adams Regional Hospital  
(MA-North Adams)  
North Adams, Massachusetts

Berkshire Medical Center  
(MA-Berkshire)  
Pittsfield, Massachusetts

Hillcrest Hospital  
(MA-Hillcrest)  
Pittsfield, Massachusetts

Northampton VA Medical Center  
(MA-Northampton)  
Northampton, Massachusetts

Beth Israel Deaconess Medical Center  
(MA-Beth Israel)  
Boston, Massachusetts

Lahey Clinic Hospital  
(MA-Lahey)  
Burlington, Massachusetts

Tufts-New England Medical Center  
(MA-N.E. Med Ctr)  
Boston, Massachusetts

Brigham and Women's Hospital  
(MA-Brigham)  
Boston, Massachusetts

Massachusetts Eye and Ear Infirmary  
(MA-MA Eye & Ear)  
Boston, Massachusetts

UMass Memorial Medical Center  
(MA-U Mass)  
Worcester, Massachusetts

Children's Hospital Boston  
(MA-Children's)  
Boston, Massachusetts

Massachusetts General Hospital  
(MA-MA General)  
Boston, Massachusetts

VA Boston Healthcare—Boston Division  
(MA-Boston VA)  
Boston, Massachusetts

Cooley Dickinson Hospital  
(MA-Cooley Dicki)  
Northampton, Massachusetts

New England Baptist Hospital  
(MA-N.E. Baptist)  
Boston, Massachusetts

VA Boston Healthcare—Brockton Division  
(MA-Brockton VA)  
Brockton, Massachusetts

Dana-Farber Cancer Institute  
(MA-Dana Farber)  
Boston, Massachusetts

Newton-Wellesley Hospital  
(MA-Newton Wells)  
Newton, Massachusetts

Other Massachusetts hospitals are grouped together in Section VIII.

**APPENDIX D**  
**Hospitals in this Report**

New York Hospitals Most Frequently Used by Vermont Residents  
(Abbreviations are used in Section VIII)

Albany Medical Center Hospital  
(NY-Albany)  
Albany, New York

Mary McClellan Hospital  
(NY-McClellan)  
Cambridge, New York

Phelps Memorial Hospital Center  
(NY-Phelps)  
Sleepy Hollow, New York

Champlain Valley Physicians Hospital  
Medical Center (NY-Champ Val)  
Plattsburgh, New York

Memorial Hospital for Cancer and Allied  
Disorders (NY-Hosp for CA)  
New York, New York

Samaritan Hospital  
(NY-Samaritan)  
Troy, New York

Columbia Presbyterian Medical Center  
(NY-Presbyterian)  
New York, New York

Moses-Ludington Hospital  
(NY-Moses-Luding)  
Ticonderoga, New York

St. Peters Hospital  
(NY-St Peters)  
Albany, New York

Glens Falls Hospital  
(NY-Glens Falls)  
Glens Falls, New York

New York United Hospital Medical Center  
(NY-United Med C.)  
Port Chester, New York

Leonard Hospital  
(NY-Leonard)  
Troy, New York

New York Weill Cornell Medical Center  
(NY-New York)  
New York, New York

Other New York hospitals are grouped  
together in Section VIII.

**APPENDIX E**  
**Towns and Hospitals in Vermont Hospital Service Areas**  
**Based on 1997-2001 Vermont Resident Immediate Care Inpatient Discharges**

BARRE – Central Vermont Medical Center

Calais+	Montpelier+	Moretown	Waitsfield+	Williamstown+
Calais	Barre City	Northfield+	Fayston	Washington
Woodbury	Barre Town	Northfield	Waitsfield	Williamstown
Worcester	Berlin	Roxbury	Warren	
Marshfield+	East Montpelier	Plainfield	Waterbury+	
Cabot	Middlesex	Topsham	Bolton	
Marshfield	Montpelier		Duxbury	
	Orange		Waterbury	

BENNINGTON – Southwestern Vermont Medical Center

Arlington+	Bennington+	Dorset+	Manchester	Whitingham
Arlington	Bennington	Dorset	Readsboro+	Wilmington+
Sandgate	Glastenbury	Rupert	Readsboro	Searsburg
Sunderland	Pownal	Dover+	Stamford	Wilmington
	Shaftsbury	Dover		
	Woodford	Somerset		

BRATTLEBORO – Brattleboro Memorial Hospital, Grace Cottage Hospital

Brattleboro+	Jamaica+	Newfane+	Vernon
Brattleboro	Jamaica	Brookline	Westminster+
Dummerston	Stratton	Newfane	Putney
Guilford	Wardsboro	Townshend	Westminster
Halifax	Winhall	Windham	
Marlboro			

+ Indicates an aggregated ZipTown group used in Sections III and IV.

Use of Hospital Service Area definitions based on 1997-2001 immediate care inpatient discharges began in 2002.

Therefore, numbers reported here are not directly comparable to those published prior to 2002.

**APPENDIX E**  
**Towns and Hospitals in Vermont Hospital Service Areas**  
**Based on 1997-2001 Vermont Resident Immediate Care Inpatient Discharges**

**BURLINGTON** – Fletcher Allen Health Care

Burlington	Fairfax	Huntington+	Milton	Westford
Cambridge+	Ferrisburgh	Buel's Gore	Monkton	Williston+
Cambridge	Grand Isle+	Huntington	Richmond	St.George
Fletcher	Grand Isle	Starksboro	Shelburne	Williston
Charlotte	North Hero	Jericho+	So. Burlington	Winooski
Colchester	Hinesburg	Jericho	South Hero	
Essex		Underhill

Burke	Danville	Lyndon	Waterford
East Haven	Walden	Wheelock	
Granby		Sheffield+	
Guildhall		Sheffield	
Lunenburg		Sutton	
Maidstone			
Newark			
Victory			

+ Indicates an aggregated ZipTown group used in Sections III and IV.

Use of Hospital Service Area definitions based on 1997-2001 immediate care inpatient discharges began in 2002.

Therefore, numbers reported here are not directly comparable to those published prior to 2002.

**APPENDIX E**  
**Towns and Hospitals in Vermont Hospital Service Areas**  
**Based on 1997-2001 Vermont Resident Immediate Care Inpatient Discharges**

WHITE RIVER JUNCTION – Dartmouth Hitchcock Medical Center, Mt. Ascutney Hospital and Health Center, and the Veterans Administration Medical Center

Bradford	Fairlee+	Hartford+	Ryegate	Windsor+
Bridgewater+	Fairlee	Hartford	Sharon	West Windsor
Bridgewater	Vershire	Pomfret	Thetford+	Windsor
Plymouth	West Fairlee	Hartland	Strafford	Woodstock
Reading	Groton+	Newbury	Thetford	
Corinth	Groton	Norwich	Tunbridge	
	Peacham	Royalton		

+ Indicates an aggregated ZipTown group used in Sections III and IV.

Use of Hospital Service Area definitions based on 1997-2001 immediate care inpatient discharges began in 2002.

Therefore, numbers reported here are not directly comparable to those published prior to 2002.

**APPENDIX F**  
**Vermont Hospital Discharge Data Elements**  
**Public / Non-Public Data Elements and Availability of Data Elements in Datasets**

Attribute	Description	Public Use Data Element	Inpatient Dataset	Outpatient Dataset	Emergency Dept. Dataset
Admission Date		N	Y	Y	Y
Admission Hour		N	Y	Y	Y
Admission Quarter		Y	Y	Y	Y
Admission Source	Transfer, referral, newborn and court/law enforcement categories	Y	Y	Y	Y
Admission Type	Emergency, urgent, elective, newborns	Y	Y	Y	Y
Age	Single-year age at discharge	N	Y	Y	Y
Age Groups	Under 1, 1-17, 18-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75 and over	Y	Y	Y	Y
Ambulatory Flag	Record having any procedure in the 00.00 - 86.99 range This flag not used for inpatient records	Y	N	Y	Y
Attending physician	Hospital-specific code for attending physician at time of discharge	N	Y	Y	Y
Bill Type	Bill type as designated by the hospital	Y	Y	Y	Y
Birth Weight	Birth weight of newborns in grams	N	Y	N	N
Charges, Charges_HCIA	Total facility charges. See description in Appendix A.	Y	Y	Y	Y
Clinical Classifications Software (CCS) Single Level Diagnosis Groups	Principal diagnosis collapsed into more than 260 categories. See description in Appendix A.	Y	Y	Y	Y
Clinical Classifications Software (CCS) High Level Diagnosis Groups	CCS single level diagnosis groups collapsed into 18 high level categories. See description in Appendix A.	Y	Y	Y	Y
Clinical Classifications Software (CCS) Single Level Procedure Groups	Principal procedure collapsed into 231 categories. See description in Appendix A.	Y	Y	Y	Y

**APPENDIX F**  
**Vermont Hospital Discharge Data Elements**  
**Public / Non-Public Data Elements and Availability of Data Elements in Datasets**

Attribute	Description	Public Use			Emergency
		Data Element	Inpatient Dataset	Outpatient Dataset	Dept. Dataset
Clinical Classifications Software (CCS) High Level Procedure Groups	CCS single level procedure groups collapsed into 16 high level categories. See description in Appendix A.	Y	Y	Y	Y
County-Town Code	Patient county and town of residence with first two digits representing the county and the second two digits the town.	N	Y	Y	Y
Critical Access Hospital	Coded for VT hospitals only	Y	Y	Y	Y
Date of Birth		N	Y	Y	Y
Diagnosis Related Group (DRG)	Medicare classification system that groups inpatient discharges into more than 900 categories based on diagnosis, type of treatment, age and other relevant criteria. See listing in Appendix C.	Y	Y	N	N
Discharge Date		N	Y	Y	Y
Discharge Quarter		Y	Y	Y	Y
Discharge Status	Categories indicating destination and type of services required at time of discharge, left against medical advice, or death	Y	Y	Y	Y
Ecode	Code for external causes of injury and poisoning; primary Ecode appears in this field, secondary Ecodes may be entered as secondary diagnoses	Y	Y	Y	Y
ERFLAG	Set to 1 if record has an associated revenue code beginning 45, Emergency Room.	Y	Y	Y	Y
Grouper	Grouper used to assign DRG and MDC	Y	Y	Y	Y
Hospital		Y	Y	Y	Y
Hospital Service Area	A grouping of Vermont ZipTowns see definition of ZipTown below) based on each ZipTown's use of hospital resources. See description in Appendix A.	Y	Y	Y	Y

**APPENDIX F**  
**Vermont Hospital Discharge Data Elements**  
**Public / Non-Public Data Elements and Availability of Data Elements in Datasets**

Attribute	Description	Public Use Data Element	Inpatient Dataset	Outpatient Dataset	Emergency Dept. Dataset
Major Diagnostic Category (MDC)	An aggregation of DRGs (see definition of DRGs above) into 25 groups that define major body systems. See listing Appendix B.	Y	Y	N	N
Other Physician 1 & 2	Hospital-specific code for other physicians performing procedures	N	Y	Y	Y
Patient Days	Length of stay; maximum 255 days	Y	Y	Y	Y
Primary Payer	The anticipated principal source of payment for the patient's hospital bill as coded by the hospital.	Y	Y	Y	Y
Principal and Secondary Procedure Dates	Date of procedure.	N	Y	Y	Y
Principal Diagnosis and Up to 19 Secondary Diagnoses	ICD-9-CM diagnosis code.	Y	Y	Y	Y
Principal Procedure and Up to 19 Secondary Procedures	ICD-9-CM procedure code.	Y	Y	Y	Y
Race		N	Y	Y	Y
Readmission indicator	Any patient readmitted to the same hospital within 30 days	N	Y	Y	Y
Same Day Flag	Admission and discharge were on the same day. Not an overnight stay.	Y	Y	Y	N
Sex		Y	Y	Y	Y
Special Care Unit Days	Number of days spent in a special care unit, Inpatient only.	Y	Y	N	N
Year of Discharge		Y	Y	Y	Y
ZIP Code	5-digit ZIP code	N	Y	Y	Y

**APPENDIX F**  
**Vermont Hospital Discharge Data Elements**  
**Public / Non-Public Data Elements and Availability of Data Elements in Datasets**

Attribute	Description	Public Use Data Element	Inpatient Dataset	Outpatient Dataset	Emergency Dept. Dataset
ZIP Code Groups	3-digit ZIP for most of Vermont ; combined 058 and 059 area; 5-digit ZIP for areas with a population over 10,000 in Vermont and combined zips in other states	Y	Y	Y	Y
ZipTown Code	Groups of towns that share ZIP code(s). See description in User's Guide to Inpatient Monograph Tables and Appendix A.	N	Y	Y	Y

Public use data for resident and non-resident discharges from Vermont hospitals are available by calendar year. To order, contact:

Vermont Department of Health  
Public Health Statistics  
108 Cherry Street, PO Box 70  
Burlington, VT 05402-0070  
(802) 863-7300 or (800) 869-2871

Non-public data elements are available for research purposes only. To request non-public data elements, contact:

Division of Health Care Administration  
89 Main Street, Drawer 20  
Montpelier, VT 05620-3601  
(802) 828-2900 or (800) 631-7788
